

Oscillator Test-Jig

Quartzcom offers oscillator test-jig's for evaluating our high precision analogue compensated TCXO's. The test-jig's are equipped with a high speed analogue buffer to allow precise signal monitoring and frequency measurement on test instruments with 50 ohm input impedance.

Test Jig available for the following oscillator type:

TX7-503-SQ & VT7-503-SQ

TX7-705-SQ & VT7-705-SQ

TX7-705-TQ & VT7-705-TQ
